BAYLANDS GOALS AND CLIMATE CHANGE: WHAT CAN WE DO?

Planning for Sea Level Rise on San Francisco's Bay Shoreline

A special program at the Exploratorium, hosted with the San Francisco Estuary Institute

The Bay Area can lead the nation on how to tackle climate change and sea level rise. Please join a panel of scientists, planners and community representatives to discuss the findings of a new, landmark study on shoreline restoration and urban planning to prepare for local sea level rise and extreme weather. The report, *Baylands Goals and Climate Change – What We Can Do*, synthesizes the recommendations of over 200 scientists and ecosystem experts in a new plan to work with our natural systems to rebuild a resilient future. What will it mean to envision our San Francisco Bay shoreline and beyond in a new way? [Report at www.baylandsgoals.org]

NATE KAUFFMAN

PANELISTS INCLUDE

Letitia Grenier: *San Francisco Estuary Institute, Co-Director, Resilient Landscape Program*

Gil Kelley: *San Francisco Planning Department, Director of Citywide Planning*

Benjamin Grant: *SPUR, Urban Design Policy Director*
